

The Bottom Line in Energy Cost Reduction is EASI

An economical approach to substantial savings on your electric bills

The "smart" electric meter:

It registers all the kilowatt hours you use but can't tell where they are wasted...

EASI* has the solution.

Now you can forget about energy conservation! It's "easy" when you leave the job to an EASI system. Once it's installed an EASI energy cost reduction system works day and night whether you are aware of it or not. And in many cases, it performs energy saving functions that are impossible to duplicate with any other method • The EASI staff has been on the cutting edge of the electrical energy conservation industry since its beginnings in the late 1970's. Since then we have pioneered many important concepts in this field and where the technology to fulfill these concepts was not available, we developed it (notably our patented fluorescent light controller). With our in-depth knowledge of the field we are able to choose from a vast array of existing products to meet the needs of

every type of business to reduce their soaring electric costs • The key to our success is the EASI "full system" approach to the problem of high electric bills. We attack virtually every area of electrical usage. In essence, we provide the hard working business manager with, "one stop shopping," to meet all of his or her electrical energy conservation needs. You can be assured if EASI uses a product in your system it has been thoroughly field tested by our experienced staff before it is incorporated into our energy conservation package • Everybody *talks* about energy conservation. At EASI our customer is following a well trodden path because we've been *doing* something about it for years.

ECONOMICAL

High return short payback on your investment.

AUTOMATIC

You do nothing. Our solid state equipment does it all.

SECURE

Verifiable savings with approved equipment.

INSURE

Your savings are guaranteed. System carries a three year warranty.
